Conserved sequences flank variable tandem repeats in two S-antigen genes of Plasmodium falciparum
genes of Plasmodium falciparum
genes of 1985)
85176931
Twenty degenerate tandem repeats of twentyfour base pairs each
start at position 953 and end at 1432.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PFASA7 3838 bp DNA linear INV 26-APR-199 Plasdmodium falciparum (isolate NF7) S antigen gene, complete cds.

This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene collected to integrity checks for sequence accuracy, presence of a polya tall and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clones that may attifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcribtase errors that result in sequence information about this sequence. Including its location for there are proverse transcribtase errors that result in sequence.

* NOTE: This is a 'working draft' sequence. It currently consists of 37 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B.Y., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, F.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The clone sequenced to the left is RP11-305H21; the clone sequenced to the right is RP11-109F19, 200 bp overlap. Actual start of this clone is at base position 1 of RP11-105L10; actual end is at base position 24605 of RP11-105F19.

Location/Qualifiers
                                                          63108, USA
                                                                                                                                                                                                                                                                         NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                         all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The position of this clone was established as part of a collaboration between the Human Chromosome Y Mapping Project (Tomoko Rawaguchi, Helen Skaletsky, Laura G. Brown, Steve Rozen, and David C. Page at the Whitehead Institute for Biomedical Research, Cambridge MA) and the Washington University Genome Sequencing Center, St. Louis MO.
                                                                                                                                                                                                                                                                                                                                                                       This sequence was finished as follows unless otherwise noted:
                Direct Submission
Submitted (14-OCT-2000) Department of Genetics, Washington
University, 4444 Forest Park Avenue, St. Louis, Missouri 63
On Oct 14, 2000 this sequence version replaced g1:6624109.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                          Direct Submission

Submitted (03-FBE-1999) Drosophila Genome Center, Lawrence Berkeley Laboratory, MS 64-121, Berkeley, CA 94720, USA
on Jan 31, 2000 this sequence version replaced gi:6587780.
For further information about this sequence, including its location and relationship to other sequences, please visit our sequence archive Web site (http://www.fruitfly.org/sequence/) or send email to bdgpefruitfly berkeley.edu. All contigs in this submission meet the following cutoffs: length >- 200 bases.

* NOTE: This is a "working draft' sequence record is a sont known and their order in this sequence record is a arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence * as soon as it is available and the accession number will

* be preserved.

/gene="HRNZ.0002c", possible periplasmic protein, len: 101
aa: similar to TR:CAB5528 (EMBL:ALI17211), YPWT1.46C,
Yersinia pestis hypothetical protein from plasmid pWT1
(111 aa), fasta scores: E(): 2.88-26, 95.58 identity in 67
aa overlap. The N-terminal 37 aa are highly similar to
YPWT1.46Ac (EMBL:ALI17211) Yersinia pestis hypothetical
protein from plasmid pWT1 (59 aa) (86.8% identity in 38 aa
overlap) which lies immediately upstream of YPWT1.46C in
pWT1. Contains a possible N-terminal signal sequence"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /product-"putative periplasmic protein"
